THE PHILIPPINES' FIRST AI-NATIVE BOOTCAMP

DOGM.AI Bootcamp

OVERVIEW

Master Fundamentals. Build Real Skills.

Learn to build real web applications from scratch — with AI as your learning partner, not your replacement. We teach you to think like a developer, then use AI to build faster.

20 Weeks	**25** Seats Available
Hybrid Remote + On-site	**Part-time** For Beginners

OUR APPROACH

The DOGM.AI Difference

Learn Core Fundamentals - How does a web app actually work?
Build With Your Hands - Write every line yourself
Use AI Strategically - Once you understand fundamentals
Become a Developer Who Uses AI - Not someone who needs it

THE PROBLEM WE SOLVE

Most "AI-native" programs promise: "Just prompt AI and it'll write your code!" That's not learning. That's outsourcing your brain. If you don't understand why the code works, you can't fix it when it breaks.

DOGM.AI is different. We believe AI should make you faster, not helpless. You'll learn the fundamentals first, then use AI to accelerate your learning and building.

20-WEEK LEARNING JOURNEY

Curriculum Overview

Phase 1: Weeks 1–4

Core Foundations

HTML, CSS, JavaScript basics, Git version control, Development environment setup

Phase 2: Weeks 5–10

Frontend Development

React components, State management, Routing & navigation, Responsive design

Phase 3: Weeks 11–15

Backend & Databases

Server-side programming, REST API design, Database modeling, Authentication

Phase 4: Weeks 16–20

Capstone Project

Planning your app, Building full features, Deploying online, Portfolio presentation

AI INTEGRATION TIMELINE

Weeks 1-4: Pure Fundamentals

No AI crutches. Understand what code is. Build muscle memory.

Weeks 5-10: Assisted Learning

AI becomes your study partner. Explains errors, suggests alternatives. But you write the logic.

Weeks 11-20: Strategic AI Use

Use AI like a pro: handle boilerplate, speed up tasks. You make all decisions.

DETAILED SYLLABUS

Weeks 1-5

Week 1: Web Fundamentals & HTML

- How the internet works: DNS, servers, browsers
- HTML structure and semantic elements
- Forms, tables, and accessibility basics
- Project: Build your first webpage

Week 2: CSS Fundamentals

- Box model, positioning, and layout
- Flexbox and Grid systems
- Responsive design with media queries
- Project: Style a multi-page website

Week 3: JavaScript Basics

- Variables, data types, and operators
- Functions, loops, and conditionals
- DOM manipulation and events
- Project: Interactive calculator app

Week 4: Git & Advanced JavaScript

- Git basics: commits, branches, merges
- Arrays, objects, and data structures
- Async JavaScript and Promises
- Project: Weather app using API

Week 5: Introduction to React

- Component-based architecture
- JSX syntax and props
- State and event handling
- Project: Todo list application

DETAILED SYLLABUS

Weeks 6-10

Week 6: React Hooks & State Management

- useState, useEffect, and custom hooks
- Context API for global state
- Component lifecycle and side effects
- Project: Shopping cart with state

Week 7: Routing & Navigation

- React Router fundamentals
- Dynamic routes and parameters
- Protected routes and navigation
- Project: Multi-page blog application

Week 8: API Integration

- REST APIs and HTTP methods
- Fetch API and axios library
- Error handling and loading states
- Project: Movie database app

Week 9: Form Handling & Validation

- Controlled vs uncontrolled components
- Form validation and error messages
- File uploads and multi-step forms
- Project: User registration system

Week 10: Advanced Styling & UI

- CSS-in-JS and styled components
- Tailwind CSS framework
- Animations and transitions
- Project: Portfolio website

DETAILED SYLLABUS

Weeks 11-15

Week 11: Backend Fundamentals

- Node.js and Express.js setup
- Server architecture and routing
- Middleware and request handling
- Project: Basic REST API server

Week 12: Database Design

- SQL vs NoSQL databases
- Database schema design
- CRUD operations and queries
- Project: Blog with database

Week 13: Authentication & Security

- Password hashing and encryption
- JWT tokens and sessions
- OAuth and social login
- Project: Secure login system

Week 14: Full-Stack Integration

- Connecting frontend to backend
- CORS and API security
- File uploads and storage
- Project: Full-stack social app

Week 15: Testing & Debugging

- Unit testing with Jest
- Integration and E2E testing
- Debugging tools and strategies
- Project: Test suite for your app

DETAILED SYLLABUS

Weeks 16-20: Capstone Project

Week 16: Project Planning & Design

- Define project scope and features
- Database schema and API design
- UI/UX wireframes and mockups
- Project setup and repository

Week 17: Core Features Development

- Build database and backend API
- Implement authentication system
- Create main user interface
- Code review and feedback session

Week 18: Advanced Features

- Add secondary features
- Implement real-time functionality
- Optimize performance
- User testing and iterations

Week 19: Deployment & DevOps

- Environment configuration
- Deploy to production (Vercel/Netlify)
- Database hosting and backups
- Domain setup and SSL

Week 20: Portfolio & Presentation

- Polish and bug fixes
- Create project documentation
- Prepare presentation slides
- Final demo and graduation

TIME COMMITMENT

Schedule & Format

WEEKLY SCHEDULE

WEEKDAY SESSIONS: MON-THU

7:00 PM - 9:30 PM (10 hours/week)

Live remote sessions via Zoom. Interactive lectures, live coding demonstrations, Q&A sessions, and collaborative problem-solving. Recordings available if you miss a session.

SATURDAY IMMERSION

9:00 AM - 3:00 PM (6 hours/week)

In-person sessions at our Philippines location. Hands-on labs, pair programming, project work, and mentorship. Build together with your cohort.

LOCATIONS

Philippines

25 seats available • Hybrid format

Remote weekdays, on-site Saturdays

WHAT YOU NEED

- Laptop (Mac or Windows, at least 8GB RAM)
- Stable internet connection for remote sessions
- 16 hours per week commitment (classes + homework)
- Willingness to struggle through hard problems
- No coding experience required - we start from zero

INVESTMENT IN YOUR FUTURE

Pricing

PRICING OPTIONS

SAVE PHP 5,000 - FULL PAYMENT (RECOMMENDED)

PHP 40,000

One-time payment • Save PHP 5,000

Early bird pricing • Limited time offer

INSTALLMENT PLAN

PHP 9,000

per month × 5 months = PHP 45,000 total

First payment due at enrollment, then monthly

WHAT'S INCLUDED

- 20 Weeks of Instruction
- Remote + On-site Sessions
- Complete Course Materials
- All Session Recordings
- Code Reviews & Debugging
- Capstone Project Support
- Portfolio Guidance
- Lifetime Alumni Access

GETTING STARTED

Enrollment Process

4 SIMPLE STEPS

Step 1: Submit Application (5 minutes)
Tell us about your goals, background, and availability. No coding experience required.

Step 2: Screening Call (15 minutes)
Quick chat to ensure this program is the right fit for your goals and schedule.

Step 3: Get Accepted (48 hours)
Receive your decision within 48 hours of your screening call.

Step 4: Secure Your Spot
Pay to reserve your spot. Pre-course prep materials sent immediately.

QUESTIONS & ANSWERS

FAQ

Do I need coding experience?

No! We start from absolute zero. If you can use a computer and browser, you're ready to start.

Will I be job-ready after 20 weeks?

This program teaches fundamentals, not job readiness. You'll have strong foundations and a portfolio project. Job readiness requires continued practice and learning beyond the bootcamp.

Do you offer job placement?

No. We teach skills, not job guarantees. We'll help with portfolio and interview prep, but the world decides if you're ready for work.

What if I miss a session?

All sessions are recorded. You can catch up on your own time. However, live participation is strongly encouraged for the best learning experience.

Can I get a refund?

Full refund available within first 2 weeks. After that, no refunds. See our refund policy on the website for complete details.

What programming language will I learn?

JavaScript - the most versatile language for web development. You'll use it for frontend (React), backend (Node.js), and full-stack applications.

How is this different from other bootcamps?

We don't promise shortcuts. We teach fundamentals first, then strategic AI use. You'll understand what you're building, not just copy-paste code.
